

Provider Performance Report

Source: Built-in synthetic demo
Requested: 2021-01-01 through 2025-12-31
Observed: 2021-01-01 through 2025-12-31 | 48 providers | 58,858 provider-day records
Coverage: observed bounds only; schedule completeness is unverified. Only selected providers, clinics, specialties and dated rows are included. No patient records.

Selected-period KPIs

Metric	Value
Visits	693,820
Capacity	965,220
Utilization	71.9%
Revenue	\$162,299,878.34
Visits / staffed hour	1.61
Unused capacity	271,400

Calculated executive summary

Selected period: Jan 1, 2021-Dec 31, 2025

Overall utilization was 71.9%: 693,820 completed visits / 965,220 staffed slots. Revenue was \$162,299,878.

Highest visit volume (ties retained): Dr. Sofia Rivera: 23,368.

Largest unused capacity (ties retained): Dr. Hugo Lane: 11,128 slots.

Largest modeled revenue opportunity: Dr. Hugo Lane: \$1,744,827 at 85% utilization.

Monthly change (separate from the selected-period totals)

Nov 1, 2025-Nov 30, 2025 → Dec 1, 2025-Dec 31, 2025. 48 matched providers; 0 excluded because one period has no observations. Bounds are available; daily completeness is not verified. Staffing exposure and visit mix may differ.

No-show rates increased for 23 of 48 providers with defined rates in both months; 0 matched providers had undefined rates.

Management review: examine scheduling access and reminders where measured gaps exist. Opportunities overlap and are not additive. Revenue opportunity is a scenario, not collections or guaranteed profit; these metrics do not establish causation or clinical quality.

Provider comparisons - selected period

provider	specialty	clinic	visits	utilization	no_show_rate	revenue	unused_capacity
Dr. Hugo Lane	Otolaryngology	Lakeside Clinic	13292	54.4%	11.4%	\$3,106,798	11128
Dr. Nina Park	Ophthalmology	West Clinic	18554	62.9%	3.4%	\$4,135,643	10942
Dr. Jude Wood	Urology	East Clinic	13776	62.9%	11.2%	\$3,447,589	8112
Dr. Vera Hall	Ophthalmology	West Clinic	19991	67.7%	11.6%	\$4,476,599	9529
Dr. Isla Morgan	Endocrinology	North Clinic	13074	59.9%	11.0%	\$2,645,839	8760

Dr. Finn Scott	Urology	East Clinic	19278	86.6%	4.9%	\$4,820,947	2988

Top opportunities - not additive

Target utilization: 85%. Gross potential revenue is an estimate, not collections, profit or a forecast. Providers with no visits have an unknown revenue rate.

Opportunity	Provider	Impact	Period
Highest unused capacity	Dr. Hugo Lane	11,128 slots	Jan 1, 2021-Dec 31, 2025
Highest no-show rate	Dr. Nico King	11.9% rate	Jan 1, 2021-Dec 31, 2025
Lowest utilization	Dr. Hugo Lane	54.4% utilization	Jan 1, 2021-Dec 31, 2025
Largest revenue opportunity	Dr. Hugo Lane	\$1,744,827 modeled gross revenue	Jan 1, 2021-Dec 31, 2025
Biggest month-over-month decline	Dr. Ada Ross	-2.4 percentage points	Nov 1, 2025-Nov 30, 2025 → Dec 1, 2025-Dec 31, 2025

Monthly trends - selected rows only

Edge months may be partial. Missing provider-days are not filled with zeros. Monthly totals are not necessarily comparable volumes.

Data quality - selected rows

Check	Status	Count	Detail
Required columns	Pass	0	All required columns present
Required values	Pass	0	Null or invalid dates / numeric values; no imputation
Provider names and identifiers	Pass	0	Names, IDs, specialties and clinics must be nonblank
Negative / infinite values	Pass	0	All measures must be finite and nonnegative
Duplicate provider/date rows	Pass	0	Duplicates would double-count activity
Utilization over 100%	Pass	0	Completed visits must not exceed capacity
Appointment counts	Pass	0	Whole counts: visits + no-shows = booked <= capacity; cancellations are not a supported measure
Staffing values	Pass	0	Staffed days require positive FTE, hours and capacity
Provider identity consistency	Pass	0	Each ID has one name, specialty and clinic
Unobserved weekdays across dataset	Pass	0	May be holidays or unscheduled days; completeness cannot be established without a staffing roster
Unobserved provider weekdays	Review	3729	Within each provider's observed bounds; may be leave or unscheduled days, not proven missing records

Metric formulas and limitations

Revenue Opportunity

Revenue opportunity = sum over providers of $\max(0, \text{target utilization} \times \text{capacity} - \text{completed visits}) \times \text{observed provider revenue per visit}$. The target is a scenario assumption. This is gross potential revenue, not profit, collections, or a forecast. A provider with zero visits has an unknown revenue rate; the dashboard stores zero as a placeholder, while this workspace reports unknown rates explicitly.

Revenue Per Visit

Revenue per visit = total revenue / completed visits. It is weighted by completed visits, not an average of daily rates. With zero visits the rate is unavailable; the legacy dashboard uses a zero placeholder.

No-Show Rate

No-show rate = $(\text{booked appointments} - \text{completed visits}) / \text{booked appointments}$. Counts satisfy $\text{booked} = \text{visits} + \text{no-shows}$. The dashboard uses zero as a placeholder for zero bookings; comparisons and this workspace report the rate as unavailable. Cancellations are not measured separately.

Unused Capacity

Unused capacity = available staffed appointment slots - completed visits = unbooked slots + no-shows. Unbooked slots = capacity - booked appointments. This is an appointment count, not a revenue estimate.

Utilization

Utilization = completed visits / available staffed appointment slots. Rollups divide summed visits by summed capacity; daily percentages are not averaged. It measures activity, not clinical quality. The validated dataset requires positive staffed capacity; empty dashboard selections use a zero placeholder and comparisons report undefined denominators as unavailable.

Productivity

Productivity = completed visits / staffed hours. Rollups use summed visits and hours. It is not adjusted for appointment complexity and is not a quality score. Validated provider-days require positive hours; the dashboard returns zero for an empty selection.

Capacity

Capacity is the number of available appointment slots in staffed sessions, summed over the selected provider-days. Leave days have no rows and no capacity; the data cannot distinguish unrecorded days from unscheduled days without a staffing roster.

Revenue

Revenue is reported revenue summed over selected provider-days. Collections, charges, costs, and profit are not separately measured. Revenue is not a proxy for those missing fields.

Visits

Completed visits are summed over selected provider-day rows. They count appointments, not unique patients; repeat patients cannot be identified from this aggregate dataset.
